Dear Hiring Team,

I am writing to express my strong interest in a Product Manager position, offering over three years of experience scaling platforms in the FinTech, PropTech, and AI-driven supply chain sectors. My professional foundation as a Software Development Engineer at Groww—where I launched features fueling \$2M+ in incremental monthly revenue and optimized architecture for 100x traffic surges—is built upon a Bachelor of Technology in Computer Science and a Master of Science in Management Science & Engineering from Columbia University. This unique blend of technical engineering and business strategy allows me to bridge the gap between complex technical feasibility and North Star metrics, a capability I have further refined as Vice President of the Columbia Product Managers Club.

I have a proven track record of leveraging AI and predictive analytics to solve high-stakes operational challenges, such as engineering an LLM-driven due diligence workflow that increased screening throughput by 5x at Victory Strategy Management. As a Product Owner at LVMH, I utilized Machine Learning to improve international delivery accuracy by 30%, while at Nestaway, I improved vendor efficiency by 35% through a centralized facility management roadmap. With proficiency in technical stacks including Python, SQL, and LLMs, I am committed to accelerating the "Idea-to-MVP" lifecycle and driving product-led growth through data-driven decision-making. I look forward to discussing how my background in scaling complex systems and leading cross-functional teams can contribute to your organization's success.

sincerely.

Vishwajeet J K
